Advanced protection against device theft, privacy invasion, mobile malware, and mobile banking threats.

Product Highlights

- » Helps your device perform faster
- » Enhances your phone's battery life
- » Locks your apps like Facebook, Twitter, Gmail, etc.
- » Fights Android viruses and malware
- » Helps you track your phone if it gets lost or stolen

Feature List

Optimize

Boost

Enhance your device's performance by killing running apps that are idle and not being used.

Battery

Keep a track of your device's battery life and kill running apps that drain battery power. Notifies you with an alarm when battery level becomes critically low. You can configure settings and disable unnecessary apps that consume too much battery.

Data Usage

Track and set your cellular data limit to manage your data usage. This helps you ensure that your data is not used unnecessarily. You can set your data plan depending on your monthly or weekly requirement. After you set the plan, you can view the remaining days and mobile data.

Floating Window

An easy shortcut that lets you free up RAM, kill running apps, and toggle between shortcuts like Wi-Fi, Ringtones, Bluetooth, Cache Cleaner, and more. The Floating Window icon can be viewed on the Home and App list screen of the device. Tapping the icon launches a window that displays a Status Button, Switch ring, and App ring.

- » **Status button:** displays the percentage of RAM consumed by apps currently running on the device. Tapping the button frees up the RAM.
- » **Switch ring:** lets you toggle between shortcuts such as Wi-Fi, Bluetooth, Torch Light, Brightness, Ringtones, Battery, and Cache Cleaner.
- » **App ring:** displays apps that are currently running on the device. An app can be killed by tapping on it; this boosts the device speed.

Privacy

App Lock

Lock WhatsApp, Snapchat, Facebook, Twitter, Messaging, Gallery, Skype, Camera, Gmail, and any app on your phone that you think can affect your privacy. You can lock both system and downloaded apps with this feature.

Block Numbers

Block calls and messages from known and unknown numbers. You can blacklist numbers starting or ending with a particular series. Spam messages can be blocked based on the keywords you provide. You can block international numbers, and report any unwanted number to TRAI (Telephone Regulatory Authority of India).

Privacy Advisor

Identify apps that might cost you money, harm your privacy, access the Internet or affect the overall security of your device. You can have a consolidated view of apps with various permissions like access to location, identity info, networks, personal data, accounts, device admin, etc. Depending on the permissions an app asks for, you can decide whether to keep it or uninstall it.

Security

Fingerprint Unlock

You can unlock your phone using your fingerprint.

Antivirus

Protect your device against malicious and harmful apps with real-time virus scans, scheduled, background, and cloud scans. View the list of threats detected during the scan under categories such as Unresolved, Resolved, and Quarantined.

Scan Before Download

Automatically scans apps even before you download them from the Google Play Store. The feature also tells you whether an app is safe to install or not. If it's not, the feature displays the risks of installing the app.

SafePe

SafePe allows you to make safe financial transactions using banking, financial, commerce, or eWallet apps. The feature helps you check whether the device environment is free from any malware before performing any financial transaction using any mobile payment app. SafePe runs safety checks for device root access, device integrity, device environment, file system, and network.

Anti-Theft

Remotely lock your lost or stolen device and wipe its data by sending predefined messages. You can also track your phone's location on a map. If your device SIM card is changed, you will get a notification on your alternate contact number. A part of this feature is Intruder Detection. It captures photos of anyone who attempts to unlock your device using a wrong PIN. You can also enable the Anti-Theft feature to lock your device if its SIM is changed, record video or audio of its nearby surrounding if it gets lost or stolen.

Security Advisor

Based on your device's current security level, this feature advises you to configure certain settings which can help increase the overall security of your phone. For example, if the 'Screen Lock' setting is not enabled on your phone, then the Security Advisor will instruct you to enable it.

Anti-Spam

This feature helps you view and delete spam messages.

Note:

- If the count of spam messages reaches 10 or more, a notification card will be displayed at 9:00 AM for every 7 days.
- This card will be displayed only if the 'Block Numbers' feature is ON.

System Requirements

Supported versions of Android

4.0 and later.

Supported resolutions of Android

Supports all screen sizes.
