## Product Highlights

### Stay protected with robust scan engine

**Virus Protection**

- Blocks virus infections that try to infect computer programs to gain admin control and steal your data.

**Malware Protection**

- Detects all kinds of malware, viruses, worms, Trojans, and spyware that try to infect your PC from various sources and removes them instantly.

**Advance DNAScan**

- Keeps an eye on all the running programs on your PC to trace any suspicious behavior. DNAScan, our indigenous and proven detection mechanism, detects new and unknown malicious threats based on behavioral classification of the documents and files.

### Secure email communications

**Email Protection**

- Prevents malwares coming through emails.

### Surf the Internet safely

**Browsing Protection**

- Blocks suspicious and harmful websites that can download malwares and worms to your PC or steal your data.

### Curb the possibility of virus spread

**USB Drive Protection**

- Stops autorun malwares of the USB drive to curb spread of malware to your system.

### Prevent ransomware attempts

**Ransomware Protection**

- Takes a backup of your data on regular basis, so if there is any ransomware attack, you can remove ransomware and restore your data without getting affected.

### Browse in a safe world

**Browser Sandbox**

- Ensures that malwares embedded in browsers do not access folders on your computer.

### Prevention is better than cure

**Scan External Devices**

- As soon as you connect any external devices to your computer, they must be scanned to ensure if they are safe and there is no risk of malware spread to your computer.
